Abstract of **JP2002251328**

PROBLEM TO BE SOLVED: To provide services for protecting contents right and individual user right, etc., by controlling of a contents presentation method and a utilization condition, etc., to a user. SOLUTION: Various controls over contents can be performed with meta-data by defining the meta-data described about detailed information in relation to the contents. A broadcasting side can define the contents providing method to a user, the utilization condition, contents storage in an enciphered state, limited reception to a terminal, limited reception to an individual or the like, and distributes defined contents together with contents to a receiving side. The service that can perform contents right protection such as a copyright by performing viewing control of a viewer, storage control, copy control, enciphering/deciphering control or the like on the basis of these definitions is provided.
